WEATHER OF CONCERN

Weather of Concern

- A weak system that will bring mainly light precipitation from Fresno County northward passes by tonight and Monday, and then a stronger storm system will impact the region during Thursday night through Friday night with substantially more precipitation, especially over the higher terrain.
- The storm could bring up to 1 foot of snow over the highest elevations of the Sierra by Friday evening with potentially hazardous winter driving conditions and travel delays.
- This system is expected to be cold with snow possibly falling as low as 4000 feet over the Kern mountains which may make driving difficult over the Grapevine on I-5, and through Tehachapi along highway 58.
- **Active Weather Warnings, Watches and Advisories by County:**
- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Snow is expected in Trinity County today, and will likely impact travel on many roadways. While snow totals will vary considerably depending on your exact location and elevation, the heaviest snow is expected across northern Trinity County where snow levels will likely remain around 2500 feet through the day. Highways 3, 36, and 299 will all likely see accumulations in various locations. A weak disturbance will bring light snow for parts of eastern California tonight and Monday. Expect up to 4" of snow above 7000 ft from Alpine County through western Lassen County. Up to 2" of snow is possible between 5500-7000 ft. Only an inch or so is possible for Mono County. A stronger and colder storm is expected Wednesday into Thursday. This storm is forecast to bring gusty winds with snow potentially reaching down to the valley floors. Peak gusts over 40 mph in the valleys and over 70 mph for the Sierra ridges are likely, with 10-18" of snowfall possible above 7000 ft and 6-10" down to 5500 ft.

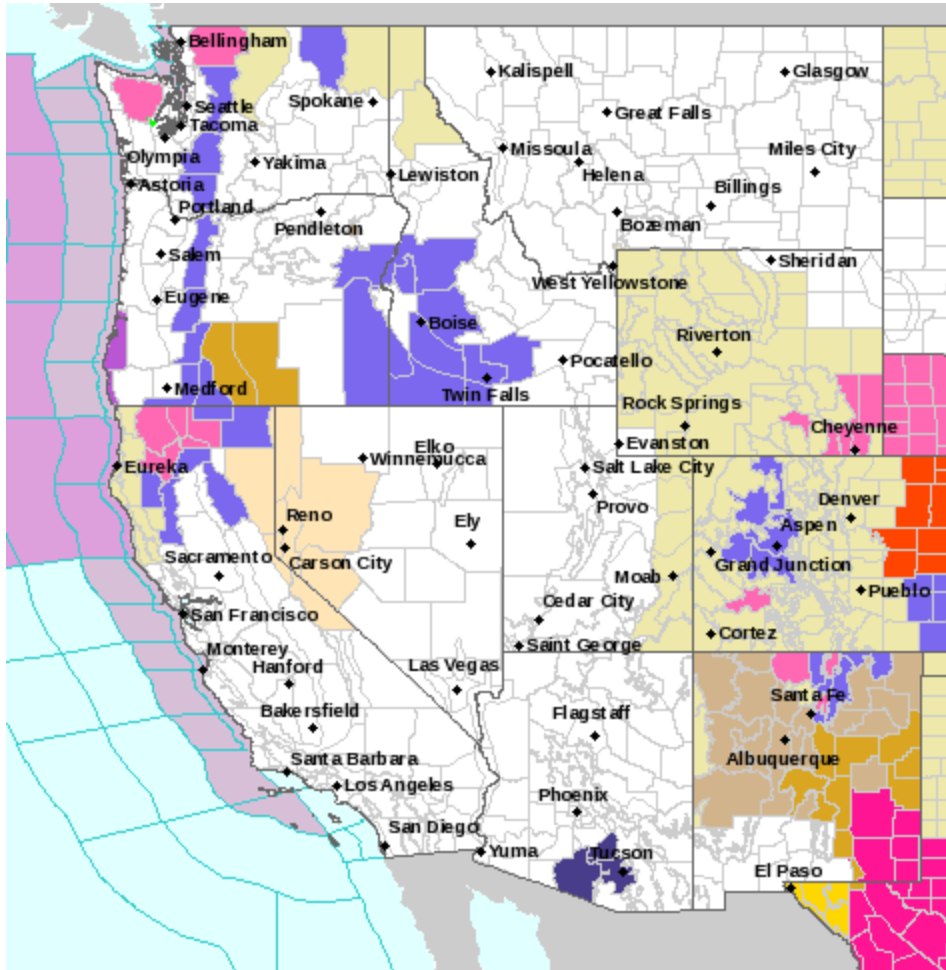

SOUTHERN CALIFORNIA

It will be cold again tonight with patchy frost possible in the Inland Empire and isolated wind sheltered areas of the San Diego County valleys tonight. Clear skies and generally light winds will lead to below normal temperatures this morning with areas of frost for colder coastal areas. A warming trend is expected through early next week as weak ridging builds aloft. A weakening cold front will likely push through the region later in the week, bringing wind and cooler conditions and possibly widespread rain and mountain snow showers.
